Subject: M.D.M

EXPERIMENT NO.05

AIM: - Develop a web application to fetch real-time weather data for a city. Use AJAX & a public weather API to retrieve information. Display temperature, humidity, and weather conditions dynamically.

CODE: -

```
<!DOCTYPE html>

<html>
<head>
    <title>Weather App</title>
</head>
<body>

<h2>Real-Time Weather App</h2>

Enter City Name:
<input type="text" id="city">
<button onclick="getWeather()">Get Weather</button>

<div id="result"></div>

<script>

function getWeather()
{
    var city = document.getElementById("city").value;
```

```

if(city == "")
{
    alert("Please enter city name");
return;
}

var apiKey = "2ad4ff8d3efce4bde10aa47375a71572"; // Replace with your API key

var url = "https://api.openweathermap.org/data/2.5/weather?q=" + city + "&appid=" +
apiKey + "&units=metric";

var xhr = new XMLHttpRequest();

xhr.open("GET", url, true);

xhr.onload = function()
{
    if(xhr.status == 200)
    {
        var data = JSON.parse(xhr.responseText);

        var temp = data.main.temp;        var
humidity = data.main.humidity;        var condition
= data.weather[0].description;

        document.getElementById("result").innerHTML =
            "<h3>Weather in " + city + "</h3>" +
            "Temperature: " + temp + " °C <br>" +
            "Humidity: " + humidity + " % <br>" +
            "Condition: " + condition;
    }
}

```

```
else
{
    document.getElementById("result").innerHTML =
        "Error: City not found";
}
};
xhr.send();
}
</script>
</body>
</html>
```

OUTPUT: -
